CALCUTTA UNIVERSITY PRESS

Senate House, Calcutta.

PREFACE

Much trouble has been taken with our illustrations, but the author is fully conscious of their many defects. I am greatly indebted to several authors mentioned in the legends to the plates as the readers will find certain of their illustrations copied in this volume. It was found necessary in a comparative study of the surgical instruments used by the different nations of the world. It has been my wish to render due credit to all persons for the illustrations by which they may severally have contributed to the advancement of our knowledge of the subject, and I have never assumed to myself drawings, which belong to others. For those illustrations, not otherwise acknowledged, the author is solely responsible.

For his skill and patience in drawing and printing these figures I am glad to take this opportunity of thanking Mr. K. V. Seyne.

The author deems it a pleasant duty to express his thanks to the University of Calcutta for the liberality displayed in the matter of illustrations.

80, RUSSA ROAD NORTH, }
Calcutta, February, 1914. } G. N. MUKHOPĀDHYĀYA.

FIGURE.	PAGE.
1.—The Seatum Hippocratis or Bench of Hippocrates, as represented by Andreas a Cruce (<i>Officina Chirurgica veteris</i> , 1596) ...	88
2.—The same as represented by M. Littré ...	88
A. A board, 6 cubits long, 2 broad and 12 inches thick; not 13 as incorrectly stated by M. Littré.	
B. The feet of the Axles, which are short.	
CC. Axe-trees.	
DD. Grooves 3 inches deep, 3 broad, separated from one another by 4 inches.	
E. A small post or pillar, fastened in the middle of the machine in a quadrangular hole.	
F. Pillars a foot long.	
G. A cross-beam laid on the pillars FF, which can be placed at different heights by means of holes in the pillars.

PLATE VIII.

FIGURE.

PAGE.

1.—Representation of the mode of reducing dislocation of the thigh outwards, as given by M. Littré (*Cœuv. d'Hipp.*, tom. iv, p. 305) ... 89

A mistake in the figure given by M. Littré is here corrected.

A. A lever applied to the nates of the luxated side, and acting from without inwards, in order to bring the head of the bone into its cavity.

B. Another lever, held by an assistant, put into one of the grooves of the machine, and intended to act against lever A.

C. Grove in which the end of the lever A takes its point of support.

D. The luxated member.

EE. Extension and counter-extension.

Adams. Vol. II. Pl. V. Fig. 1.

2.—The double inclined plane (*Planum inclinatum duplex*) framed out of some boards and provided at the sides with wooden pegs, by which the borders of the quilled horse hair mattress, supporting the leg, are pressed against the limb, Esmarch. Fig. 201 89
